NON LINEAR LIGHTING – LINEAR is a lighting installation based on a simplicity of form and organized chaos. The thick slabs of acrylic are bisected by a glowing line of light, while colorful woven cords dance from one light to the next. The LED lighting embedded in the acrylic can be dimmed and even adjusted smoothly from warm to cool color temperature via remote control. LINEAR is available in 8-foot and 4-foot models with a variety of color options for the woven cords. Visit our website for available cord colors.

1" thick acrylic, warm/cool adjustable LEDs, remote control, power supply, colored cord jumper cables

NON FLIP LIGHT - The FLIP LIGHT is a fun and tactile luminaire that changes color when it rotates. An equilibrium sensor patented by NON, enables every movement of the fixture to be reflected chromatically in its glow. Playing with a FLIP LIGHT enables the user to find any color in the spectrum of light by simply rolling it, tossing it and spinning it, creating animations of light which are in direct response to the interactions taking place.

Acrylic, Corian, rechargeable lithium battery and charger, RGB LEDs, sensor

NON WET LAMP - The WET LAMP is an elegant and playful series of hand blown glass lamps, each with an alluring water-submerged light bulb at its center. Putting an exposed light bulb in water certainly raises some eyebrows, but it also creates an intriguingly simple dimmer switch. When a thin silver rod is slid into the water, the WET Lamp turns on and becomes progressively brighter as the rod is submerged. The silver rod slides smoothly through a silicone gasket, carrying current into the water and creating an infatuating user interaction. Despite its precarious concept, the WET LAMP is a completely safe and isolated system of low voltage power and easily replaceable bulbs.

Borosilicate glass, Xenon bulb, 12V wall adapter, silicone
